AQUA CORONA WATER FEATURE INSTALLED AT URI GELLER'S LUXURIOUS THAMES-SIDE HOME

Sui Generis' striking Aqua Corona fibreglass water feature has been installed into the home of one of the world's most investigated and celebrated mystifiers, Uri Geller.

Famous around the globe for his mind-bending abilities, Uri Geller, specified the contemporary water feature to sit alongside his outdoor modern art collection, and to create a focal point, which would double-up as a seating option for guests at his garden parties, at his impressive Thames-side home.

Uri Geller says: “I wanted to create a bold dramatic statement, but also wanted a unique piece that was comfortable and made to an exceptionally high quality. I had searched the marketplace and found nothing to match Sui Generis’ circular water feature. It also provided the perfect home for my spherical art sculpture too.”

Aqua Corona is a circular hand-crafted water feature designed to transform domestic, urban or commercial landscapes. The water feature is also available in a semi-circular design and is highly durable, weather resistant and requires the minimum of maintenance.

Mark Went, Managing Director, Sui Generis, adds: “Once again we’re delighted that our GeoMet collection has been chosen to add beauty to a very special landscape. I understand how much Uri’s garden means to him and it is an absolute pleasure to have worked on this project.”

The Aqua Corona water feature has also been specified for a wide-range of commercial interiors and exteriors as well as statement pieces for the luxurious home market.
